Teenager stage is most sensitive stage in every one's life. It not only provides access children are moving away from their educational achievements, regularities in study home work and school timings also.

In this critical stage careful handling from parent side is essential Parent child relations should be emotional and providing confidence and support child should be kept away from bad habits, violence.

The study focuses parent child relation parent awareness and support this study is based on data collected from 560 parents in Amravati district.

The silent findings derived from the study are parent awareness on child is essential Selection of friends, keeping away from media are parenting skills Child should be given independent existence. Parenting is skill and hence it is challenge before parent.

Parents try to treat these children as if they are children; But at the same time, they are expected to act responsibly as they grow older. So the gap in the sexual parameters also feels special. Even parents find it hard to believe that the restrictions they have imposed are offensive to their children.

Introduction:

In the era of information and technology parent child relations are reached to new dimension Migration for earning technologies at the hand of child has changed not only family life but also children's awareness about technology and access to it. Majority of time parents are away from home resulting in children playing with T.V. and mobile. Teenager stage is most sensitive stage in every one's life. It not only provides access to the availabilities but also changes attitude.

Children are moving away from their educational achievements. Regularities in study, home work, school timings has become headache to parent resulting in stretching parent child relation. Attraction towards fashion, arrogant behavior, insisting for their requirements, not listening to parent instruction is widening relation gap parent and child complain about each other.

It the critical stage for teenager where careful handing from the side of parent is essential else it will change life direction of children and move away from education.

Parent child relations should be emotional and providing confidence and physical mental emotional support to child. It will help in building self confidence on educational achievements and skill development It is responsibility of parent to keep child on right track, it will help in keeping child away from bad habits violence by providing love and affection.

Effective parenting is one of the two most important aspects of adolescent childrens emotions and behaviors. Creating an environment where mentally retarded children can have mental security. This is the real responsibility of parents The present study of cases on parent child relation parents support and awareness with following objectives

Objectives :

- 1) To study the parents awareness in parents child relation
- 2) To study the support provided by parent in parent child relation

Review of literature :

Pande Pratibha (2006) studied parent child relation study was conducted in Kanpur city. A sample of 400 teenager was selected for the study. The silent finding from the study are parent behavior towards children was expectation based. However, mother attitude and behavior with child was supportive as compared to father. There was significant impact of family socio-Economic status and child Sex.

Thakare Manjusha (2012) studied child relation in light of pre and post independent family life style Data was collected with the help of specially designed questionnaire. The findings of study were during Pre independence era parents to reserve time for child to know about his/her difficulties school activities and requirement which has changed totally during post independent era. Parent do not have time to spend with their child.

Sweta (2016) Parent nature, behavior tension affect the child empowerment Parential stress effects child physical and mental health adversely. It also effect child self confidence and academic achievement.

Research Methodology:

The study was undertaken in seven tahsils of Amravati district. A sample of 560 children and 560 Parent selected for the study from 28 schools. Data was collected by using specially designed questionnaire. Simple tabular analysis method was used to interpret ate finding.

Hypothesis :

- 1) Parent-child relation affect child over all development
- 2) Teenager need support and cooperation.

Result and Discussion:

The data on mother and father awarness in child reation presented in following tables and discussed. Findings are summarised
